

Data Structure Examples using OOP

Basic Data Structure

Stack

Queue

List-like classes via inheritance

- Consider a task of constructing a custom list that will automatically store numbers as strings only. Some of the behaviours are as follow:

```
new_data = StrList([1,2,3,4]) => new_data: ['1','2','3','4']
```

```
new_data.append(5) => new_data: ['1','2','3','4','5']
```

```
new_data.insert(0,0) => new_data: ['0','1','2','3','4','5']
```
